------------------------	---

- 1 The average daily balance is calculated by adding the principal in your account for each day of the period and dividing that figure by the number of days in the period.
- 2 This is a tiered-rate account that pays interest in different amounts as the account balance increases or decreases.
- 3 At our discretion, the interest rate and annual percentage yield may change at any time without notice or limits.
- 4 Deposits made after the close of any business day, or on non-business days, are considered as having been made on the following business day.
- 5 The daily balance method applies a daily periodic rate to the current balance in your account each day, which may be based on your balance (also called your current or ledger balance) or collected balance as explained in the product information for your account. The collected balance is the balance of all deposits in your account on which we have received credit for the deposited funds.
- 6 The interest rate is the annualized percentage rate we pay you on your account and does not reflect compound interest which is any interest paid on the interest you've already earned.
- 7 Annual percentage yield (APY) is the annualized percentage rate we pay you on your account and includes compound interest. The APY may be higher than the interest rate due to compound interest.
